..... follow me

This tiger shark has the latest generation of satellite tags attached to its dorsal fin.

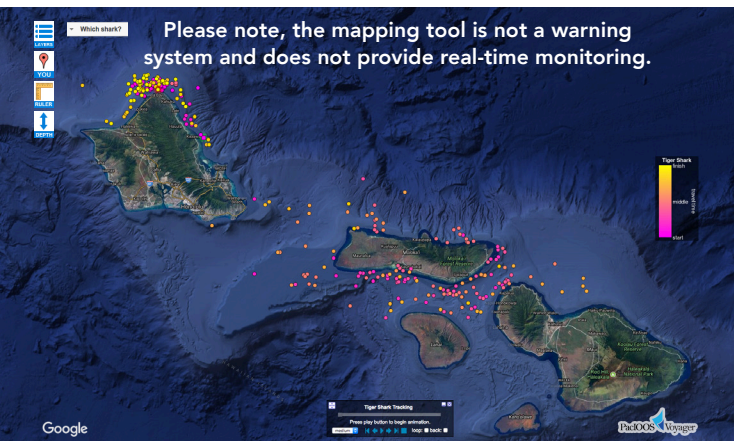

© Mark Royer

Researchers from the Hawai'i Institute of Marine Biology equip tiger sharks with satellite tracking devices. Every time the shark's dorsal fin surfaces the water, a signal transmits the shark's location as well as oceanographic data. This technology helps experts to learn about shark behavior and habitat selection in Hawaiian waters.

TRACK A TIGER SHARK

*Select a tiger shark online, and track its path!
PacIOOS makes tiger shark tracks available at*
